Caring for Someone with AIDS-Related Dementia

A PalCare Network Core 2 Workshop for professionals and experienced caregivers

*In Partnership with
The AIDS Committee for York Region*

Pal Care Network in partnership with the AIDS Committee of York Region is proud to present Maureen Mahan – Education Development Coordinator at Casey House Hospice. This free Core 2 Session on HIV and AIDS-Related Dementia will uncover some of the unique characteristics of caring for someone with AIDS-Related dementia along with valuable insights into how you can provide the best care for your client. Currently there are more than 4,200 people living with HIV in our area. While people with HIV are living longer, this also means we will continue to see age related complications with the clients we serve. AIDS-Related Dementia is not limited to the old. Young people too may develop dementia related to their AIDS diagnosis. Come learn with us!

When: February
Time: 3pm-5pm OR 6pm-8pm
Location: Richmond Hill, York Region Police Headquarters,
171 Major Mackenzie Dr. West

Free admission, but seating will be limited. To reserve your place and ensure Core 2 credit, email Haran at education@palcarenetwork.org or call 905-895-3628 ext. 3142
